

C8 MailBot Pro

Installation & getting started guide

Version 1.0.75 · Windows 10 and 11

This guide takes you from download to your first email in about 10 minutes. If you get stuck at any step, email us at hola@ceiflabs.com.

Before you start

- ✓ A computer running 64-bit Windows 10 or 11.
- ✓ About 300 MB of free disk space.
- ✓ An internet connection to activate your license and send or receive email.
- ✓ Your license key: it arrives in your purchase confirmation email.
- ✓ Your email account details (address, password and IMAP/SMTP servers).
- ✓ Optional: an API key from an AI provider for the smart features.

Contents

- | | | | |
|---|--------------------------------|----|-----------------------------|
| 1 | Download the installer | 6 | First launch |
| 2 | If Windows shows a warning | 7 | Activate your license |
| 3 | Choose who it is installed for | 8 | Complete the welcome wizard |
| 4 | Confirm the install folder | 9 | Add your email account |
| 5 | Finish and launch the app | 10 | Connect your AI |

1 Download the installer

Download **C8 MailBot Pro Setup 1.0.75.exe** from the link in your purchase receipt or from your customer portal. It is about 95 MB.

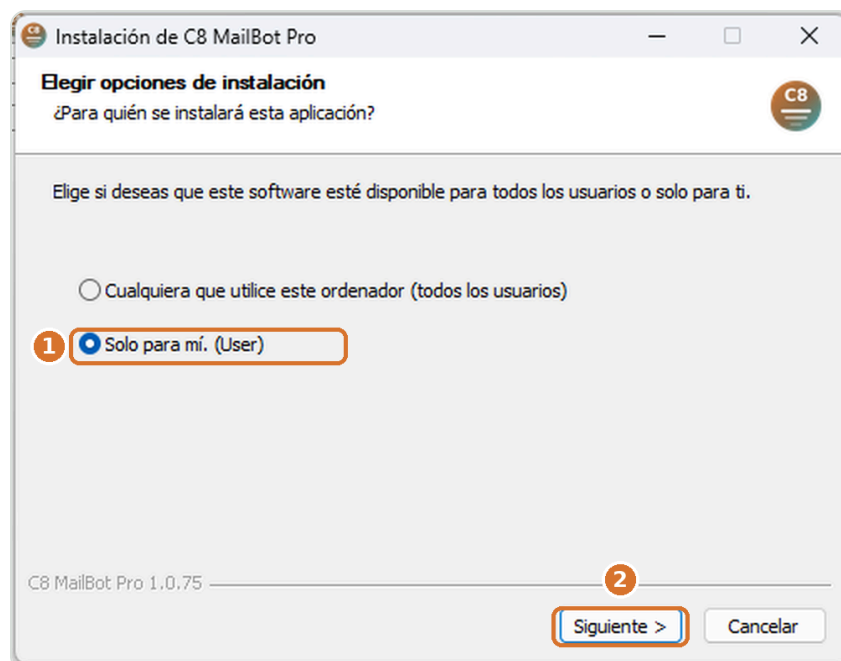

Nombre	Fecha de modificación	Tipo	Tamaño
 C8 MailBot Pro Setup 1.0.75	24/09/2026 11:22 a. m.	Aplicación	97,034 KB

2 If Windows shows a warning

When you open the installer, Windows may show **"Windows protected your PC"**. This is normal for new software. Click **More info** and then **Run anyway**. Only download the installer from your receipt or c8mailbotpro.ceiflabs.com.

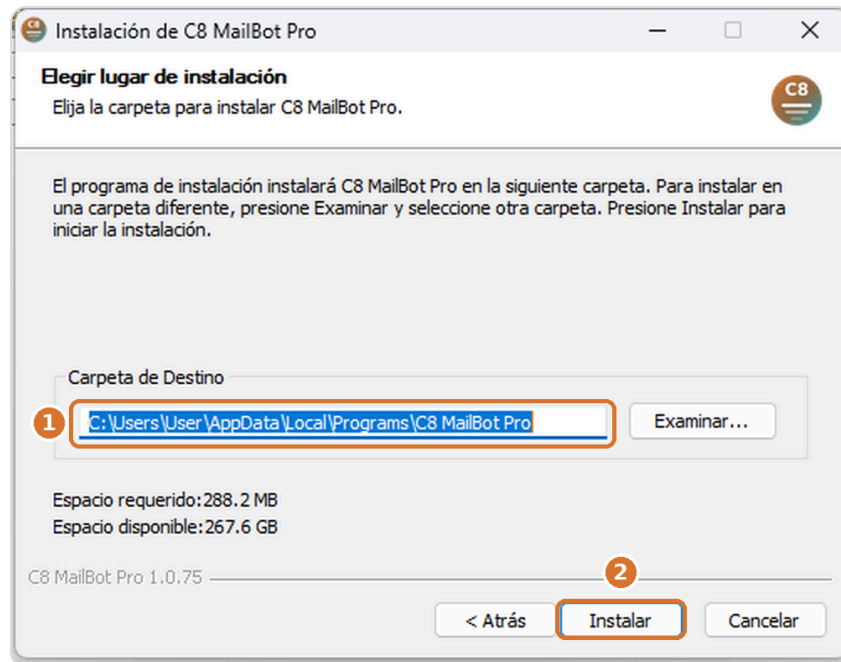

3 Choose who it is installed for

Select **Only for me** (1), the recommended option because it doesn't need administrator rights. Then click **Next** (2). The installer screens appear in your Windows language.

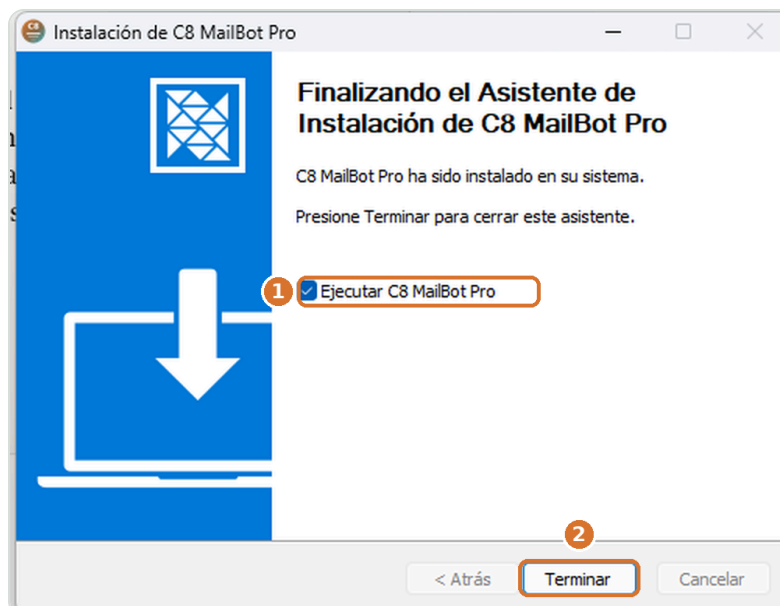

4 Confirm the install folder

Keep the default folder (1) unless you have a reason to change it. Click **Install** (2). Installation takes less than a minute.

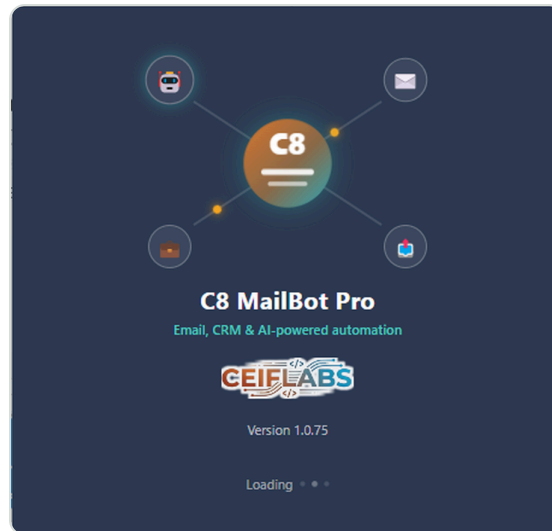

5 Finish and launch the app

Leave **Run C8 MailBot Pro** checked (1) and click **Finish** (2). From now on you'll find the app in the Start menu and on your desktop.

6 First launch

You'll see the C8 MailBot Pro loading screen. The first time it may take a few extra seconds while it prepares your files.

7 Activate your license

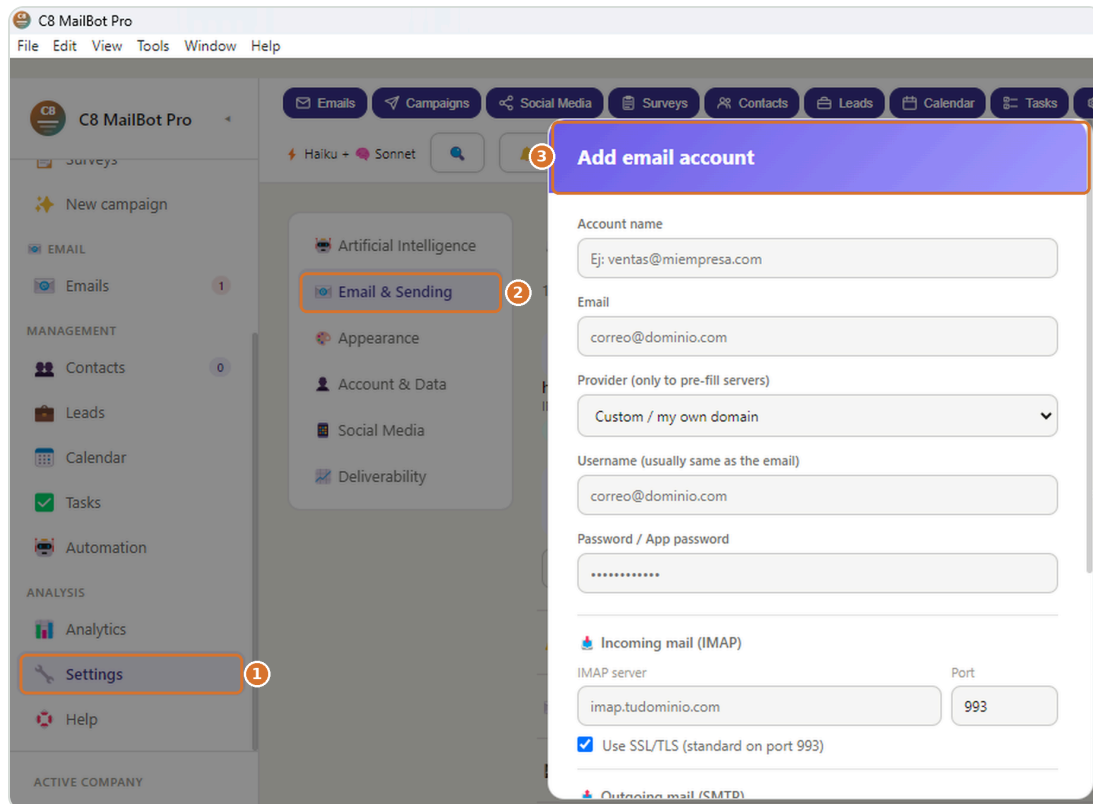

Copy the license key from your purchase email, paste it into the activation window and confirm. Each individual license activates on **1 computer**. The app checks your license online from time to time, so connect to the internet at least every few days.

8 Complete the welcome wizard

Choose your language (English or Spanish) and follow the wizard. You can change the language later in Settings.

9 Add your email account

Go to **Settings** (1) → **Email & Sending** (2) and add an account (3). Enter your email and password; if you pick your provider from the list, the servers fill in automatically. If you use your own domain, ask your email provider for the IMAP and SMTP details.

Using Gmail or another account with 2-step verification? Your regular password won't work: you need an **app password**, which you create in your account's security settings.

10 Connect your AI

In **Settings** → **Artificial Intelligence**, choose your provider (for example Anthropic, OpenAI, xAI or Perplexity) and paste your API key. You pay for AI usage directly to that provider, based on what you use.

Troubleshooting

My email account won't connect

Check your username and password, use an app password if your account has 2-step verification, and make sure IMAP access is enabled with your provider. The usual ports are 993 (IMAP with SSL) and 465 or 587 (SMTP).

My antivirus blocks the installer

Allow the file in your antivirus and open it again. Always download it from your receipt or our website.

"Activation limit reached"

Your license is already active on another computer. If you changed computers, email us and we'll release it.

How do I update the app?

Nothing to do: the app downloads updates in the background and asks you to restart when they're ready.

Where is my data stored?

Your emails, contacts and settings are stored on your own computer. Back them up regularly.

Need help?
